

NEW PARTNERSHIP WILL HELP SMALL BUSINESSES PREPARE AGAINST GROWING CYBERSECURITY THREATS

For Immediate Release

March 18, 2019

Washington, D.C. – Technology has transformed the way small companies do business, allowing them to find new clients and sell their goods and services all over the world. Yet many small businesses who utilize these new technologies lack the resources - both financial and technical to implement sound cybersafe best practices. To help address this problem, we are excited about the new partnership between The National Cybersecurity Society (NCSS) and Atlas Cybersecurity.

"We believe this partnership will provide our small businesses with access to expertise and technical solutions tailored to their needs", states NCSS CEO, Mary Ellen Seale. "In our experience, many have yet to implement basic protections - like firewalls, antivirus software, spam filters or data-encryption tools. Additionally, many lack an IT department or formal Internet security policies for employees. Small businesses need solutions that are accessible - both in terms of cost and ease of implementation".

Atlas Cybersecurity - a managed security service provider, is providing a full range of security services. Basic services include continuous monitoring, a 24/7/365 security operations center, endpoint and network defense - with additional features of auditing and pen testing. Currently we are working to highlight these services on the NCSS website. CEO, Ben Dynkin of Atlas Cybersecurity states "by working with the NCSS, we are able to provide access to sorely needed services to a segment of the market that has been historically underserved."

ABOUT THE NATIONAL CYBERSECURITY SOCIETY

The National Cybersecurity Society is committed to improving the online safety and security of the small business community through education, awareness, and advocacy. As a 501(3)(c) organization, the NCSS uses funds from charitable donations and grants to develop educational materials, webinars, weekly cyber tips, videos and conferences. The organization's goal is to enable and empower small and medium businesses to obtain cybersecurity services; assist them in understanding their cyber risk; and advise on the type of protection needed.

ABOUT Atlas Cybersecurity

Atlas Cybersecurity is a full-service cybersecurity company, providing a range of security services including managed security, security consulting, testing, and auditing. The team comes from Fortune 500 companies, the military, and the Intelligence community and have worked to defend some of the most sensitive systems and data in the world.
